- 12" Cleaning Path
- Counter-rotating cylindrical brushes allow forward and reverse operation
- Brushes require no tools to change or remove
- Compact design allows operation in small spaces

The Port a Scrub is a compact and versatile cleaning machine which excels on any type of hard floor

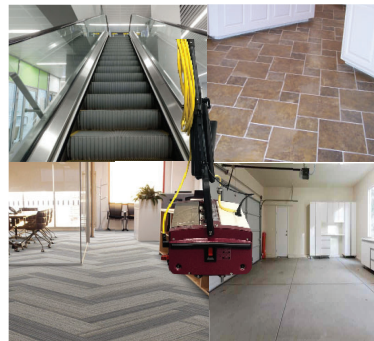

Minuteman®

More Than Just Clean

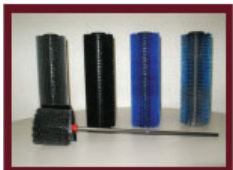

Brushes require no tools to change or remove.

Counter-rotating cylindrical brushes allow the Port A Scrub 12 to glide back and forth in forward or reverse operation.

Clean virtually any floor such as vinyl tile, hardwood, concrete, short nap carpeting, diamond plate, quarry tile, brick, slate, mosaic, studded rubber, granite, marble, rubber floors, even escalators.

Four brush options for various hard and soft surface cleaning

Operator Friendly

All inclusive with easy to understand controls with a compact design and great maneuverability allows anyone to use the Port A Scrub with minimal training.

Quick and Efficient Multi-Purpose Machine

A 12-inch cleaning path helps the Port A Scrub to fit into tight or congested areas. Due to its compact design, this machine can be operated under shelves, tables and chairs, in places where other machines cannot reach.

The Port A Scrub puts the water and chemical down, scrubs with two counter rotating cylindrical brushes and picks up the dirty water, leaving the floor virtually dry. Running at a low noise level of 66 db (A), operation is possible in noise sensitive areas.
